

Fun! **Interesting!**

Hands-On!

Useful!

Impactful!

Prerequisites: Biology and Geometry

AP Environmental Science

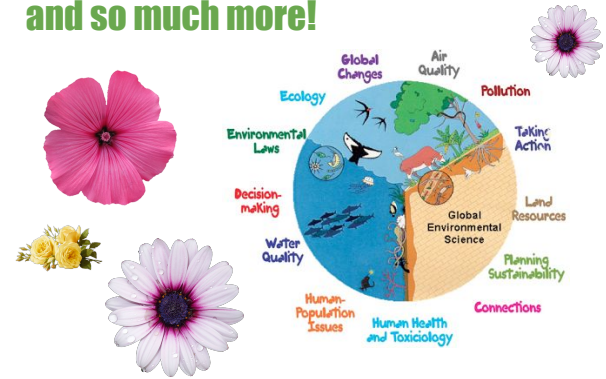

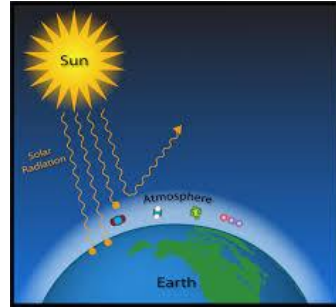

This course is a rigorous, college-level study of environmental topics including:

- **the interdependence of Earth's systems**
- **human populations dynamics**
- **ecology and endangered species**
- **renewable and nonrenewable resources**
- **environmental quality of soil, water and air**
- **global changes and their consequences**
- **environmental decision-making**

Some top college majors APES helps with are engineering, chemistry, architecture, botany, etc. Many career areas this course helps with are engineers, medical careers, community planners, and so much more!

The course also includes the strong lab component designated by the College Board. Students will prepare to take the **AP Environmental Science Exam in May.**
